
fitd FILE
flags override settings in the file
FITD_DEBUG=1
traces each probe
Output
- as input
reads the source from stdin; then needs -o
fitd a.fitd b.fitd ... -o FILE.pdf
one PDF, one page per
input, in the order given
each page is laid out on its own;
if any fails, nothing is written
--tikz, --stable, --watch,
and stdin take one input
--scale PX
PNG pixels per point, default 2
--tikz FILE.tex
also write standalone LaTeX
with absolute positions
-o FILE.svg|.png|.pdf
format by extension; SVG is
page-sized (default FILE.svg)
PNG is cropped to the
drawing plus --margin padding
PDF is page-sized, fonts
embedded, text selectable
--short
one line per diagnostic, for agents and editors
--force
write output despite checker errors
Workflow
Subcommands
fitd guide: the language on one page
fitd explain CODE: the
long form of a diagnostic
fitd split FILE: one page
per branch; see page 5
fitd import FILE.dot|.mmd|.d2:
translate from Graphviz,
Mermaid, or D2, listing what has no equivalent
fitd lsp: language server for editors
--watch
rebuild on change; see page 4
--stable LOCK
keep the layout steady across edits; see page 3
Search
--draft
coarser font search, one font, short polish:
2 to 6 times faster for editing
--expand-budget STEPS
macro expansion steps, default 100000
--budget CHECKS
solver checks per probe, default 20M
Page
and font
--page a0..a4|WxH[pt|mm]
--portrait / --landscape
fix the orientation; otherwise
a named paper may be
turned when that clears warnings
--margin PT
--max-font PT
--min-font PT
hard floor; also raises the legibility floor of the
trade-off, default 16pt per
meter of page diagonal
--wrap EM
--font-family NAME
--bands N
most bands a long flowchart
wraps into; 1 never wraps
--theme light|dark|mono
swaps the preset, keeps the file's overrides

text=#111111
text in boxes; root outline
edge=#555555
layered arrows
link=#777777
dashed cross links
Theme colors
each box below is filled with its light default
label=#555555
edge label text
background=#FFFFFF
page, box interiors, label backing
root=#EEEEEE
radial root circle fill
theme
light|dark|mono
key=#hex
every option has a default:
leave them all out and the
output is light in DejaVu Serif
dark suits screens,
mono prints in grayscale
colors are #RGB or #RRGGBB
palette="#1565C0 #C62828 ..."
branch colors, cycled; 8 by default
quoted, space or comma separated
font ... family="Inter"
measured and drawn in that
family; must be installed
(fc-list : family); fallbacks cover missing glyphs
changes measured widths, so
font size and layout may change
without fontconfig the
family is ignored with a note
On nodes, edges, groups
color=#hex
node or style: border, tint,
circle fill, branch lines
edge: stroke and arrowhead
group: frame border, tint,
and title (default theme edge)
fill=#hex
solid fill instead of the tint of color
text=#hex
default theme text, or black
or white by contrast on a fill

Why
the solver is global: one new node can move every other one and change the font
Ignored or skipped
a lock for another page size is ignored with a note
the warning-driven retry is skipped: it would move everything
delete the lock to lay out afresh
Read the lock
font, page, and every node center
plain text, diffs well, can be committed
Try locked spots first
nodes added since the lock are placed freely; removed ones are dropped
Charge every move
about one edge crossing per node that leaves its spot, plus a pull per em of distance
Polish two fonts
the locked font, while it still fits, and the new largest; better merit wins
next build
Write the lock
Effect
adding one leaf keeps the font and every spot; deleting a large branch lets the font grow
the build log counts the nodes that kept their spots

Save
Draft build
at once, coarse font search
1.5 s quiet
Full build
trade-off and full polish
Output replaced
atomically, never half a file
first
a newer save kills it

What crosses pages
an edge between pages is drawn
on both, each time to a stub
of the far end whose body names its page
a group keeps each page's members
a chain keeps each run
of links within one page
an align keeps each page's
part of two or more nodes
a near or ordering between
pages, or a node alone in an align,
is left out and listed as a warning
comments are not carried over
map.fitd
the original, too big for one page
fitd split map.fitd [-o DIR], default map-pages/
Ordinary source
every page includes the shared
file, so each builds alone
and a style edited once changes every page
edit the split files freely; split
again only from the original
map-pages/
map.fitd (overview)
root plus one stub per branch
map-a.fitd
branch a, rooted at its top node
map-b.fitd
branch b, rooted at its top node
map-c.fitd
branch c, rooted at its top node
include
map-shared.fitd
layout, page, font, theme, styles
